

# National Security & Door Corp.

Safety and security has become a complex issue in today's society, not just schools but any public building needs to address the safety and security of its occupants. After the 2007 mass shooting at Virginia Tech, and then the 2012 shooting at Sandy Hook Elementary School, the general public realized that school security had become a prime concern. Following these tragic events, numerous security products were introduced into the marketplace to provide safe-haven / "shelter in place" capabilities for students and staff. Unfortunately, many of these products did not comply with life safety, free egress, or fire codes. Realizing that none of these products offered a comprehensive "one-source" solution, National Security & Door set out to develop a lockset that would provide a "Safe-Space" while complying with all current codes. Using Schlage's L-Series mortise lock as a basis of design, National Security & Door saw the potential of combining the integrity of their deadbolt mortise lock, with a newly innovated visual lock status indicator creating a simple, mechanical lockset that provides redundancy in both locking and visual status, while maintaining free egress as well as life safety. The "Safe-Space" mortise lock is ideal for retrofit of existing openings, new construction, and can be adapted to work with access control applications.
